<table>
<thead>
<tr>
<th>API Manager and API Analytics (Add-on)(^1,(^2)</th>
</tr>
</thead>
</table>
- **API Management**
- **API Analytics**
- **Unlimited API Portal Registered Applications** (application objects created through the organization’s API portals)
- **Unlimited Managed API traffic**\(^{(7)}\) in Production and Pre-Production

**On-premises Management + API Manager & Analytics + Platinum (Add-on group)**
- Purchasing these three products together as add-ons to the Anypoint Platform Base Subscription entitles customer to **Anypoint Platform On-premises Edition**

**Anypoint Platform Base Subscription 2X2 renewal**
- Same as Anypoint Platform Base Subscription except:
  - 2 Production Cores/VCores
  - 2 Pre-Production Cores/VCores

**Anypoint VPC (Add-on)**
- **1 Production VPC**
- **1 Production VPN connection**

**Anypoint MQ Base Subscription (Add-on)**
- 500 Million API Requests per month
  - **Encrypted Queues**
  - **Unlimited Client Applications**

**Anypoint MQ 500M Additional API Requests**
- 500 Million API Requests per month
  - **Encrypted Queues**
  - **Unlimited Client Applications**

**Anypoint Data Gateway (Add-on)**
- **1 Production VPC**
- **1 Production VPN connection**
- **1 Pre-Production VPC**
- **1 Pre-Production VPN connection**

**Definitions:**

**Anypoint Platform**: MuleSoft’s integration application and API suite, comprised of a unique toolset that enables organizations to create, integrate, model, build, and
deploy services, APIs, and Mule applications.

**API Service**: An entity as modeled within the Anypoint Platform for APIs repository, which has defined as part of it one or more endpoints that point to an Anypoint Platform for APIs Gateway application.

**CloudHub**: The platform-as-a-service (PaaS) component of the Cloud Offerings.

**Connector**: A connector provides connectivity to other applications and/or protocols. A connector is any Mule extension that is built as an Anypoint DevKit Connector or any Mule Transport implementation whether it is included within Mule Studio, downloaded from the extensions repository or Anypoint Exchange, custom built, or acquired through other means.

**Design**: Software or Cloud Offerings used in Design Center for development purposes.

**Developer Workstation**: Software used by an individual developer on a workstation solely to develop and debug applications.

**Disaster Recovery**: When licensed, purchased Cores may be used for the purpose of Disaster Recovery, where Disaster Recovery is defined as a method of redundancy in which the secondary (i.e. backup) system is called upon when the primary system has failed. Redundant Cores may be activated for Disaster Recovery when Production Cores are non-operational. Once Production Cores are reactivated, the workload must be fully returned to Production Cores, and the Disaster Recovery Cores must be deactivated within 10 business days following the reactivation of the Production environment. If the original Production environment is not recoverable, the Disaster Recovery environment may be designated as the new primary operating environment. Active, redundant operation of Cores in Disaster Recovery & Production environments at the same time is prohibited except during periods of workload transfer or disaster recovery testing, which period shall not exceed 10 days per year.
**Mule**: The runtime engine of Anypoint Platform.

**Pre-Production**: Software or Cloud Offerings used in any non-Production environment for development, sandbox, quality assurance, testing, or staging purposes.

**Production**: Software or Cloud Offerings used in a live production environment, being actively used to process data or provide information to end-users, but not being simultaneously used for development or pre-production purposes.

(1) Anything listed as unlimited is subject to technical limitations as defined in Documentation

(2) All functionality offered in the cloud unless otherwise stated

(3) Each additional Pre-Production Core/VCore purchase comes with one additional Design VCore

(4) Flexible Hybrid Deployment: Up to the capacity limit identified in the Order Form, Customer may use either Cores or VCores in accordance with the (as the case may be) license to Software and access to Cloud Offerings terms as provided for in the applicable Master Subscription Agreement and Order Form. To the extent that Customer seeks to exchange a Core for a VCore or vice versa (which exchange shall occur no more than once per month), Customer’s authorized representative shall submit a Flexible Deployment Notification available from the Product Subscription Plans page to MuleSoft (i) requesting license keys for Cores or log-in credentials for VCores for the additional capacity being added, and (ii) covenant that, upon issuance of the additional Cores or VCores, Customer will deprecate the usage of the Cores or VCores no longer used. Within forty-eight (48) hours of receipt of such Flexible Deployment Notification, MuleSoft shall issue license keys for Cores or log-in credentials for VCores to Customer.

(5) Multi-instance: Ability to operate multiple instances of Anypoint Runtime Manager on-premises - Only available if Anypoint Platform Base Subscription, On-premises Management, API Manager and API Analytics, and Platinum Subscription are purchased together.

(6) Effective as of Dec 15, 2017, available only at time of initial Anypoint Platform Base Subscription as a one-time configuration option. Add-on purchases will be configured per the original control plane deployment option selected at time of purchase.

(7) Managed API traffic: Requests/response message count going through an endpoint that associated by the API gateway with an API version and as such, is enabled with Analytics and policies can be applied to it.
